2. Hayasi (US 6,706,967 B2) shows a semiconductor device comprising at least one semiconductor element 20 having a first and an opposed, second side, which at least one semiconductor element is provided with a first pad 21 and a second pad 22. In Fig. 2A, 134, 144, and 124 can be read as first, second and third pads, whereas said first and second pads are provided with a first and second side face, and said contact pad is provided with a first side face, said first side faces of said first and second contact pads 134 and 144 are facing said first side face of said third contact pad 124 and are separated by a spacing. However, Hayasi '967 fails to disclose that said first, second and third contact pads 134, 144, and 124 are provided on said semiconductor element 20; and further fails to disclose the followings: said first side faces of said first and second contact pads 134 and 144 are separated by a spacing that is continuous along said first side faces, and said second side faces of said first and second contact pads are facing each other and comprises a first part and a second part, the first part located nearer to the first side face than the second part, and whereas said first parts of said second side faces of said first and second contact pads are at a mutual distance that is smaller than the distance between said parts of these side parts. Regarding three or more contact pads, please see Yoshiki (JP 6-84915) and Fig. 2 of Nakashugi (JP 3-205853).
